

PORTFOLIO MANAGER COMMENTARY

Bonds returned 0.27% in June, short of the cash return of 0.56% and lagging well behind inflation-linked bonds which returned 1.3%. The fund returned 0.72% for the month and 1.91% for the quarter.

The past quarter was largely dominated by a combination of global fears about sovereign debt (especially in the European peripheral countries: Greece, Spain and Portugal), and domestic news that showed a combination of economic recovery taking hold, with CPI inflation continually coming in lower than forecasted.

Although the massive IMF/EU rescue package announced in May helped stem the spiral that had been seen in peripheral euro markets in general and Greece in particular, it is clear that these economies are by no means out of the woods.

Support for local bonds has come from a number of sources. As with other emerging markets, SA has also seen inflows. Foreigners bought a net R33 billion worth of local bonds in the first six months of 2010. This has clearly been a source of support for local bond yields, helping offset the increased supply associated with SA's currently large budget deficit.

Local news has generally been positive for bonds. The 'Goldilocks' outlook that we alluded to some time ago has materialised, with CPI inflation surprising most initial 2010 forecasts on the downside while growth has exceeded initial expectations. CPI printed at 4.6% in May, comfortably in the middle of the target range, while GDP grew by 4.6% in the first quarter, with export sectors as well as domestic consumption showing a rebound. This in turn has been positive for the fiscus, and the indications so far this year are that the Budget deficit will come in significantly below the initial Treasury estimate of 6.2% of GDP. This should help relieve funding pressure.

While CPI is expected to still fall slightly from its current levels, we think the bottom is near. A potential rise in CPI (especially if the rand weakens) combined with stronger domestic demand and already very low real interest rates, leads us to think that further interest rate cuts are unlikely. Rather, the next move is deciding when factors will combine in such a way as to induce the SA Reserve Bank to start hiking rates (although such a move is probably a year away yet).

The fund is designed to maximise yield over time and given the current low point in the interest rate cycle, the fund has continued to invest in longer dated floating rate investments as this is where we see the best value. Issuance in 2 – 4 year floating rate notes has been strong. The fund holds 65.8% in floating rate investments which under current credit conditions pay an attractive spread averaging 1.5% over the JIBAR reference rate. These act as a good interest rate hedge when interest rates begin to rise.

Inflation-linked bonds had a good quarter returning 5.1% versus nominal bonds which returned 1.1%. The fund holds 10% in these inflation-hedging investments as a core holding.

Portfolio manager
Tania Miglietta

Fund category Domestic - Fixed Interest - Income
Fund description Aims to provide a high level of current income with moderate levels of capital growth. Stability of capital invested is of prime focus.
Launch date 03 April 2000
Portfolio manager/s Tania Miglietta

Fund size R74.02 million
NAV 1108.36 cents
Benchmark BEASSA ALBI (1-3 year) TR Index
Risk profile Cons Mod Aggr

FEES (excl. VAT)

Initial Fee	Coronation: 0.00%
Annual Management Fee*	0.75%

* A portion of Coronation's annual management fee may be paid to administration platforms like LISP's as a payment for administrative and distribution services.

Advice Costs (excluding VAT)

- Initial and ongoing advice fees may be facilitated on agreement between the Client and Financial Advisor.
- An initial advice fee may be negotiated to a maximum of 0.75% and is applied to each contribution and deducted before investment is made.
- Ongoing advice fees may be negotiated to a maximum of 0.50% per annum, charged by way of unit reduction and paid to the Financial Advisor monthly in arrears. This annual advice fee is not part of the normal annual management fee as disclosed above.
- Where commission and incentives are paid, these are included in the overall costs.

Total Expense Ratio (TER)² 0.91% per annum

Unit trusts should be considered a medium- to long-term investment. The value of units may go down as well as up. Past performance is not necessarily an indication of future performance. Unit trusts are traded at ruling prices and can engage in scrip lending and borrowing. Fluctuations or movements in exchange rates may cause the value of underlying investments to go up or down. Instructions must reach the Management Company before 2pm (12pm for the Money Market Fund) to ensure same day value. Fund valuations take place at approximately 15h00 each business day and forward pricing is used. Coronation is a Full member of the Association for Savings & Investment SA (ASISA). ¹Performance is quoted from Morningstar as at 30 June 2010 for a lump sum investment using Class A NAV prices with income distributions reinvested. Performance figures are quoted after the deduction of all costs incurred within the fund. ²The TER is calculated as a percentage of the average NAV of the portfolio incurred as charges, levies and fees in the management of the portfolio for a rolling 12-month period to end March 2010. A higher TER ratio does not necessarily imply a poor return nor does a low TER imply a good return. The current disclosed TER cannot be regarded as an indication of future TER's.
