

WHAT IS THE FUND'S OBJECTIVE?

Strategic Income aims to achieve a higher return than a traditional money market or pure income fund.

WHAT DOES THE FUND INVEST IN?

Strategic Income can invest in a wide variety of assets, such as cash, government and corporate bonds, inflation-linked bonds and listed property, both in South Africa and internationally.

As great care is taken to protect the fund against loss, Strategic Income does not invest in ordinary shares and its combined exposure to listed property (typically max. 10%), preference shares (typically max. 10%), international assets (typically max. 10%) and hybrid instruments (typically max. 5%) would generally not exceed 25% of the fund.

The fund has a flexible mandate with no prescribed maturity or duration limits for its investments. The fund is mandated to use derivative instruments for efficient portfolio management purposes.

IMPORTANT PORTFOLIO CHARACTERISTICS AND RISKS

Risk Profile

Maximum growth/ minimum income exposures

Strategic Income is tactically managed to secure an attractive return, while protecting capital.

Its investments are carefully researched by a large and experienced investment team and subjected to a strict risk management process. The fund is actively positioned to balance long-term strategic positions with shorter-term tactical opportunities to achieve the best possible income.

While the fund is managed in a conservative and defensive manner, there are no guarantees it will always outperform cash over short periods of time. Capital losses are possible, especially in the case of negative credit events affecting underlying holdings.

HOW LONG SHOULD INVESTORS REMAIN INVESTED?

The recommended investment term is 12-months and longer. The fund's exposure to growth assets like listed property and preference shares will cause price fluctuations from day to day, making it unsuitable as an alternative to a money market fund over very short investment horizons (12-months and shorter). Note that the fund is also less likely to outperform money market funds in a rising interest rate environment.

Given its limited exposure to growth assets, the fund is not suited for investment terms of longer than five years.

WHO SHOULD CONSIDER INVESTING IN THE FUND?

Investors who

- are looking for an intelligent alternative to cash or bank deposits over periods from 12 to 36 months;
- seek managed exposure to income generating investments;
- are believers in the benefits of active management within the fixed interest universe.

WHAT COSTS CAN I EXPECT TO PAY?

An annual fee of 0.85% (excl. VAT) is payable.

Fund expenses that are incurred in the fund include trading, custody and audit charges. All performance information is disclosed after deducting all fees and other fund costs.

We do not charge fees to access or withdraw from the fund.

More detail is available on www.coronation.com.

Please note that the commentary is for the retail class of the fund.

The fund returned 0.43% in February, bringing its total return for the 12-month period to 8.67%. This is well ahead of the returns delivered by both cash (7.09%) and its benchmark (7.82%) over the same one-year period.

The All Bond Index had another strong month following its rally in January, reflecting not only supportive global market sentiment, but also renewed optimism about domestic political change, with the appointment of Cyril Ramaphosa as president of the country on 15 February 2018. The aggregate index rose 3.9% during the month. The rally was also relatively broad-based, with longer-dated bonds (12+ years) performing best (5.02%), followed by the belly of the curve (7 to 12 years), which rose 2.9%. Short-dated bonds (1 to 3 years) were up 1.13%, and bonds maturing 3 to 7 years rose 1.55%. Inflation-linkers rose 1.12%, while cash returned 0.52%.

While the generally positive economic news continued into February, central bank rhetoric in developed economies generated some volatility, and US president Donald Trump's tariff announcement in early March added considerable uncertainty.

In the US, incoming activity data have been mixed in the wake of the announced tax changes and fiscal adjustment. February ISM data rose 1.7 points to 60.8, from 59.1, personal spending showed nominal growth of 0.2% and durable goods sales contracted -3.7% m/m. Taken together, GDP is tracking about 1.7% q/q, broadly on track for 3.45% annualised. With respect to inflation, the January data again surprised markets to the upside. Core CPI rose 0.35% m/m, with surprises over a relatively broad base and 2.1% y/y. However, core PCE inflation was stable at 0.3% m/m and 1.5% y/y. The January employment report showed strong gains in average hourly earnings, which rose 0.3% on the month ahead of consensus. The market is now pricing three hikes of 25 basis points (bps) each this year, from two hikes prior to the February Federal Open Market Committee meeting. Consensus forecasts are closer to four hikes in 2018.

Economic news from Europe remained relatively strong. Euro area PMIs were a little weaker in February at 57.5, nonetheless GDP is tracking ahead of the fourth quarter of last year's 0.6% q/q. Euro area inflation remains well within target, despite the elevated rate of output growth and low unemployment. February inflation data were in line with expectations, HICP inflation eased to 1.2% y/y from 1.3% y/y (off a low base), and core inflation was unchanged at 1.0% y/y. Forward looking data suggest inflation has troughed, and headline CPI is expected to return to 1.5% - 1.6% y/y from March. Upside risk, for now, is balanced by the appreciation in the euro.

In the UK, Brexit negotiations remain at the centre of domestic politics. The draft EU exit treaty was unveiled by the European Commission at the end of February, highlighting the sticky negotiating points which still require legal clarity. The Northern Irish Border is still the biggest sticking point, and with no clear resolution in sight, the March 22-23 EU summit deadline seems likely to be missed. If sufficient clarity is achieved by June, then a final deal seems likely only in October, with considerable risk that this deadline comes under pressure too. Data show that growth momentum continues to slow. Manufacturing PMIs fell again in February to 55.2 (55.3), continuing the weaker trend off last November's peak. Consumer confidence gave back some of the January rebound, falling back to a level of -10. The housing market remains under pressure, with Nationwide house prices falling 0.3% m/m in February.

In South Africa, despite the 1% VAT hike, which will add up to 0.6ppts to headline inflation, the stronger currency should ensure inflation remains within the target range through 2018, with January's CPI print showing inflation of 4.4% y/y and further moderation expected in February, and an even lower print possible with another cut to fuel prices in March. Given the somewhat tighter fiscal policy signalled in the Budget, coupled with the change in political leadership and Cabinet reshuffle (and despite the VAT hike), we think Moody's might just keep South Africa at investment grade at its March review, leaving room for the MPC to cut rates by 25 bps at the March meeting. At the end of February, shorter-dated negotiable certificates of deposit (NCDs) traded at 8.11% (three-year) and 8.64% (five-year) respectively, slightly lower than January's closes. NCD spreads relative to cash remain at quite tight levels due to a compression in credit spreads. NCDs continue to hold appeal due to the inherent protection offered by their yields and relative to our expectations for the repo rate. However, the hunt for yield in the local market has started to push bank credit spreads into expensive territory (less than 100 bps in the three-year area and 130 bps in the five-year area). The fund continues to hold decent exposure to these instruments (both floating and fixed), but we will remain cautious and selective when increasing exposure. NCDs have the added benefit of being liquid, thus aligning the liquidity of the fund with the needs of its investors.

The rand rally lost momentum in February as it ended the month at 11.89, 0.5% stronger than its close in January, but still ahead of its emerging markets peer group. February was a tense month of negotiations taking place behind closed doors in South Africa: Former President Jacob Zuma resigned on 14 February, with Cyril Ramaphosa sworn in on Thursday, 15 February 2018. Just four working days later former finance minister Malusi Gigaba delivered the 2018/9 Budget, which detailed a 1% VAT hike to 15%, effective in April. Total revenue increases of R36 billion were announced for the coming fiscal year. On Monday, 26 February, President Ramaphosa reshuffled his Cabinet, replacing amongst others, Malusi Gigaba, with former finance minister Nhlanhla Nene. At current levels, the rand seems to price a great deal of the good news in and we would expect a halt in the rally that we have seen over the last two months. The fund maintains its healthy exposure to offshore assets, and when valuations are stretched, it will hedge/unhedge portions of its exposure back into rands/dollars by selling/buying

JSE-traded currency futures (US dollar, UK pound and euro). These instruments are used to adjust the fund's exposure synthetically, allowing it to maintain its core holdings in offshore assets. (It has the added benefit of enhancing the fund's yield when bringing offshore exposure back to rand.)

Recent political changes in SA have the potential to positively influence policy implementation, and place the local economy on a path to rehabilitation. Parastatals need to be stabilised, growth initiatives need to be pursued in earnest, and confidence needs to be restored in SA's institutions in order to put SA on a more sustainable path towards higher growth. In the short term, growth could receive a boost from consumer spending and inventory renewal as corporate SA starts to spend again after a multi-year hiatus. Inflation will remain well behaved with chances of further downside surprises added to the case for a lower repo rate. SA government bonds should benefit from this renewed optimism and contained inflation. However, at current levels, they price in a great deal of good news and are at best fair to slightly expensive, keeping us more neutral in our allocation to SA government bonds, looking instead for more attractive levels to enter overweight positions.

The SA listed-property sector lost 10.5% in February, bringing its return for rolling 12-month period to -8%. Despite the recent fall, we remain confident that the sector offers selective value. The changes in the property sector over the last decade (including the increased ability to hedge borrowings and large offshore exposures) have rendered the yield gap between the property index and the current 10-year government bond a poor measure of value. If one excludes the offshore exposure, the property sector's yield rises to approximately 9.6%, which compares very favourably to the benchmark bond. The fund maintains holdings in counters that offer strong distribution and income growth, with upside to their net asset value valuations. In the event of a moderation in listed property valuations (which may be triggered by further risk asset or bond market weakness), we will look to increase the fund's exposure to this sector at more attractive levels.

The preference share index was up 0.54% in February, bringing its 12-month return to -2.8%. Preference shares offer a steady dividend yield, linked to the prime rate and, depending on the risk profile of the issuer, currently yield between 8.5% and 11% (subject to a 20% dividends tax, depending on the investor entity). The change in capital structure requirements mandated by Basel III will discourage banks from issuing preference shares. This will limit availability (and boost possible buybacks). In addition, most of the bank-related preference shares trade at a discount, which enhances their attractiveness for holders from a total return perspective and increases the likelihood of bank buybacks. Despite attractive valuations, this asset class will continue to dissipate given the lack of new issuance and because it stands at risk of being classified as eligible loss-absorbing capital (only senior to equity). The fund maintains select exposure to certain high-quality corporate preference shares, but will not actively look to increase its holdings.

We remain vigilant of risks emanating from the dislocations between stretched valuations and the underlying fundamentals of the SA economy. However, we believe that the fund's current positioning correctly reflects appropriate levels of caution. The fund's yield of 8.91% remains attractive relative to its duration risk. We continue to believe that this yield is an adequate proxy for expected fund performance over the next 12 months.

As is evident, we remain cautious in our management of the fund. We continue to invest only in assets and instruments that we believe have the correct risk and term premium, to limit investor downside and enhance yield.

IMPORTANT INFORMATION THAT SHOULD BE CONSIDERED BEFORE INVESTING IN THE CORONATION STRATEGIC INCOME FUND

Unit trusts should be considered medium- to long-term investments. The value of units may go down as well as up, and therefore Coronation does not make any guarantees with respect to the protection of capital or returns. Past performance is not necessarily an indication of future performance. The fund is mandated to invest up to 10% of its portfolio into foreign securities and may as a result be exposed to macroeconomic, settlement, political, tax, reporting or illiquidity risk factors that may be different to similar investments in the South African markets. Fluctuations or movements in exchange rates may cause the value of underlying investments to go up or down. Asset allocation is reflected on a look-through basis. The fund is managed in line with Regulation 28 limits, although it is not required as per the fund's supplemental deed. The yield shown is an estimate (gross of fees) in part based on market assumptions and forecasts. The yield is calculated by taking the interest and income receivable of all the instruments in the fund divided by the net asset value, expressed as a nominal annual rate. It is provided to give an approximate indication of the achievable yield for an investment made at the reporting date. Actual experience may differ, based on changes in market values, interest rates and changes in costs actually experienced during the investment period.

Coronation Management Company (RF) (Pty) Ltd is a Collective Investment Schemes Manager approved by the Financial Services Board in terms of the Collective Investment Schemes Control Act. Portfolio managed by Coronation Asset Management (Pty) (FSP 548) Ltd, an authorised financial services provider. The Management Company reserves the right to close the fund to new investors if we deem it necessary to limit further inflows in order for it to be managed in accordance with its mandate. Unit trusts are allowed to engage in scrip lending and borrowing. Standard Chartered has been appointed as trustees for the fund (www.sc.com/za; 011-2176600). Coronation is a full member of the Association for Savings & Investment SA (ASISA).

HOW ARE UNITS PRICED AND AT WHICH PRICE WILL MY TRANSACTION BE EXECUTED?

Unit trusts are traded at ruling prices set on every trading day. Fund valuations take place at approximately 15h00 each business day, except at month end when the valuation is performed at approximately 17h00 (JSE market close) and forward pricing is used. Instructions must reach the Management Company before 14h00 (12h00 for the Money Market Fund) to ensure same day value. The payment of withdrawals may be delayed in extraordinary circumstances, when the manager with the consent of the fund trustees deem this to be in the interest of all fund investors. These circumstances may include periods when significant underlying markets suspend trading which will prevent accurate valuation of the instruments held in the fund. When the suspension of trading relates to only certain assets held by the fund, these assets may be side-pocketed. This process allows normal liquidity on the assets that can be valued, but will delay liquidity on the affected portion of the fund. If the fund is faced with excessive withdrawals, the affected withdrawals may be ring-fenced, which is the separation and delayed sale of the assets reflecting the interest of the liquidity seeking investors. It ensures that the sale of a large number of units will not force Coronation to sell the underlying investments in a manner that may have a negative impact on remaining investors of the fund.

HOW WAS THE PERFORMANCE INFORMATION INCLUDED IN THIS FACT SHEET CALCULATED?

Performance is calculated by Coronation as at the last day of the month for a lump sum investment using Class A NAV prices with income distributions reinvested. All underlying price and distribution data is sourced from Morningstar. Performance figures are quoted after the deduction of all costs (including manager fees and trading costs) incurred within the fund. Note that individual investor performance may differ as a result of the actual investment date, the date of reinvestment of distributions and dividend withholding tax, where applicable. Annualised performance figures represent the geometric average return earned by the fund over the given time period. Unannualised performance represents the total return earned by the fund over the given time period, expressed as a percentage.

WHAT IS THE TOTAL EXPENSE RATIO (TER) AND TRANSACTION COSTS (TC)?

TER is calculated as a percentage of the average net asset value of the portfolio incurred as charges, levies and fees in the management of the portfolio. The TER charged by any underlying fund held as part of a fund's portfolio is included in the fund expenses portion of the TER, but trading and implementation costs incurred in managing the fund are excluded. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TER's. The 1 year TER is for the 12 months to end of September 2017 (updated annually). The 3 year TER is for a rolling 36-month period to the last quarter end (December, March, June and September).

Transaction costs are a necessary cost in managing a fund and impacts the fund's return. They should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund, the investment decisions of the investment manager and the TER.

The Total Investment Charge is the sum of the Total Expense Ratio (TER) and transaction costs.

ADVICE AND PLATFORM COSTS

Coronation does not provide financial advice. If you appoint an advisor, advice fees are contracted directly between you and the advisor. We will facilitate the collection of advice fees only upon receiving your instruction, up to a maximum of an initial fee of 3.00% and an ongoing fee of 1.00% per annum (where an initial advice fee of more than 1.50% is selected, the maximum annual advice fee that we will collect is 0.50%). Advice fees are usually collected through the redemption of units. You may cancel the instruction to facilitate the payment of advice fees at any time. Advisors will only share in Coronation fees subject to prior approval by and/or disclosure to the investor. A portion of Coronation's annual management fee may be paid to administration platforms such as Linked Investment Service Providers (LISPs) as a payment for administration and distribution services.

WHERE CAN I FIND ADDITIONAL INFORMATION?

Additional information such as daily fund prices, brochures, application forms and a schedule of fund fees and charges is available on our website, www.coronation.com
