Fund Information as at 30 November 2018

WHAT IS THE FUND'S OBJECTIVE?

Global Opportunities Equity seeks to give investors access to some of the best fund managers across the globe. Our intent is to outperform its benchmark over any five year period.

WHAT DOES THE FUND INVEST IN?

Global Opportunities Equity is a multi-manager fund which invests in a limited number of strategies (funds and segregated mandates) managed by top-quality managers that mainly have exposure to shares in developed markets. It is also mandated to include some exposure to emerging markets.

Typically, six to ten strategies are included. Each strategy is selected based on its long-term track record of outperforming the market, its investment philosophy and the quality of its fund managers.

The fund is mandated to use derivative instruments for efficient portfolio management purposes.

IMPORTANT PORTFOLIO CHARACTERISTICS AND RISKS

Global Opportunities Equity invests in equity funds that mostly cover developed markets, including the US, Europe and Japan.

The fund is well-diversified; it has exposure to a range of different countries, industries and fund manager styles. The fund managers included in the fund are well-established and have been rigorously researched and vetted.

While we have a disciplined approach to carefully balance the risks across the different funds, shares can be volatile investments and there is a meaningful risk of capital loss over the short term. Global currency movements may intensify investment gains or declines.

This feeder fund aims to remain fully invested in units in the offshore domiciled Global Opportunities Equity Fund. The only other assets that will be held at feeder fund level are local and foreign cash holdings for liquidity purposes.

HOW LONG SHOULD INVESTORS REMAIN INVESTED?

The fund is managed to deliver the best possible returns over the long term; an investment horizon of 10 years or more is therefore ideal. It is not suitable as a single investment for investors who need to preserve their capital over five years or less.

WHO SHOULD CONSIDER INVESTING IN THE FUND?

Investors who are building wealth, and who

- want exposure to some of the world's top equity funds as part of a diversified investment portfolio;
- accept that the fund may underperform the market significantly in the short term in pursuit of superior long-term gains;
- are overexposed to South Africa and require an international investment;
- do not require an income from their investment.

WHAT COSTS CAN I EXPECT TO PAY?

An annual fee of 0.85% is payable.

Of the annual fee, 0.40% is collected at feeder fund level, while the balance of the fee is collected in the master fund.

The component of the fund fee charged at feeder fund level is subject to VAT. Fund expenses that are incurred in the fund include annual fees paid to unconnected underlying fund managers, administrative, trading, custody and audit charges. All performance information is disclosed after deducting all fees and other portfolio costs.

We do not charge any fees to access or withdraw from the fund.

More detail is available on www.coronation.com.

WHO IS THE FUND MANAGER?

RISK STATISTICS SINCE LAUNCH

Quarterly Portfolio Manager Commentary

Please note that the commentary is for the US dollar retail class of the fund. The feeder fund is 100% invested in the underlying US dollar fund. However, given small valuation, trading and translation differences for the two funds, investors should expect differences in returns in the short term. Over the long term, we aim to achieve the same outcome in US dollar terms for both funds.

The fund rose 1.3% against the benchmark advance of 4.3%, bringing the rolling 12-month performance to 9.3% against the 9.8% returned by the MSCI All Country World Index.

Developed market equities rose strongly over the quarter, shrugging off a further US Federal Reserve rate hike in September and increasing trade war tensions between the US and China after US President Trump introduced tariffs on an additional \$200-billion of US imports from China, with the introduction rate of 10% set to increase to 25% in 2019. This was primarily owing to robust global growth, which the US economy continues to drive, with strong growth supported by Japan, Korea and Taiwan. Emerging markets declined by 2.0% for the quarter and briefly went into a bear market by falling more than 20% since their peak level in January, before recovering somewhat towards the end of the quarter. A strong US dollar has put pressure on those countries with current account deficits to raise rates, most notably Argentina and Turkey, and caused some volatility in other emerging markets.

North America was again the best-performing region in Q3, rising 7.2%. The weakest return was from the Pacific ex-Japan, which declined 0.5% (in US dollar terms). Japan rose 3.8% (in US dollar terms) and Europe advanced 0.8% (in US dollar terms). Emerging markets were again very weak, declining 2.0% (in US dollar terms), significantly underperforming developed markets, which rose by 4.3%. On a look-through basis, the fund is overweight North America, equal weight to Europe and underweight Japan.

Among the global sectors, healthcare (+11.2%), information technology (+7.9%) and industrials (+5.7%) generated the best returns. The worstperforming sectors were real estate (-1.6%), materials (-1.2%) and energy +0.1%). On a look-through basis, the fund underperformed due to an underweight in healthcare and an overweight to consumer discretionary stock. An overweight to technology stocks was beneficial to the fund.

The fund's biggest detractor for the quarter was Contrarius Global Equity, which underperformed the benchmark by 9.3%. However, despite this quarterly setback, Contrarius' return has been so strong over the year that it has still generated 5.3% alpha on a year-to-date basis. This quarter's performance was largely driven by Twitter (-34.8%), which closed a large number of fake accounts that distorted their user numbers, the consumer discretionary stocks JC Penny (-29.1%), Bed Bath & Beyond (-24.1%) and JD.Com (-33.0%).

The fund's emerging market exposure, through the Coronation Global Emerging Markets Fund, was also a significant detractor, given that emerging markets underperformed developed markets by a wide margin over the quarter. However, the manager also underperformed the emerging market index, with detractors including Yes Bank (-46.0%), JD.com (-33.0%) and Ctrip (-22.0%). Despite the turmoil in emerging markets, there were also some positive returns, including Pin An Insurance (+11.2%), Kroton (23.7%) and Visa (+13.5%).

Tremblant, Egerton, Eminence and Coronation Global Equity Select all detracted over the quarter with relative underperformance against the index.

Maverick enjoyed a good quarter, posting modest alpha of 1% with good contributions from many of their top holdings including Shire (+8.5%), Walt Disney (+12.5%), DXC Technology (+16.3%) and Microsoft (+16.4%).

Outlook

Global monetary policy remains on a steady footing, with the US Federal Reserve on a slow and steady increase trajectory and Europe, UK and Japan still in an accommodative phase for the next 12 months or longer. This should be generally supportive of developed market equities, although they do look expensive on some metrics. Emerging markets have experienced some pain in recent quarters, but are now on attractive valuations, offering good growth at a reasonable price. The risk at this time remains the unknown outcome of the US-China trade talks, which have reached somewhat of an impasse with US President Trump's imposition of additional tariffs. The tension will ratchet up another level come the new year, when the rate increases to 25%. A further risk is the Brexit negotiations, which need to be finalised by November in order for any agreement to be ratified by the exit date of 29 March 2019. Although the potential for no deal has increased in recent months, such an outcome would be very disruptive to European markets. There is potential for some volatility in coming months.

Portfolio manager Tony Gibson as at 30 September 2018

IMPORTANT INFORMATION THAT SHOULD BE CONSIDERED BEFORE INVESTING IN THE CORONATION GLOBAL OPPORTUNITIES [ZAR] FEEDER FUND

The Global Opportunities Equity [ZAR] Feeder Fund should be considered a long-term investment. The value of units may go down as well as up, and therefore Coronation does not make any guarantees with respect to the protection of capital or returns. Past performance is not necessarily an indication of future performance. The fund is mandated to invest up to 100% of its portfolio into foreign securities and may as a result be exposed to macroeconomic, settlement, political, tax, reporting or illiquidity risk factors that may be different to similar investments in the South African markets. Fluctuations or movements in exchange rates may cause the value of underlying investments to go up or down. The top 10 holdings are reflected on a look-through basis. A feeder fund invests in a single fund of a collective investment scheme, which levies its own charges and could result in a higher fee structure for the feeder fund. Coronation Management Company (RF) (Pty) Ltd is a Collective Investment Schemes Manager approved by the Financial Sector Conduct Authority in terms of the Collective Investment Schemes Control Act. Portfolio managed by Coronation Investment Management International (Pty) Ltd (FSP45646), an authorised financial services provider. The Management Company reserves the right to close the fund to new investors if we deem it necessary to limit further inflows in order for it to be managed in accordance with its mandate. Unit trusts are allowed to engage in scrip lending and borrowing. Standard Chartered has been appointed as trustees for the fund (www.sc.com/za; 011-2176600). Coronation is a full member of the Association for Savings & Investment SA (ASISA).

HOW ARE UNITS PRICED AND AT WHICH PRICE WILL MY TRANSACTION BE EXECUTED?

Unit trusts are traded at ruling prices set on every trading day. Fund valuations take place at approximately 15h00 each business day, except at month end when the valuation is performed at approximately 17h00 (JSE market close) and forward pricing is used. Instructions must reach the Management Company before 14h00 (12h00 for the Money Market Fund) to ensure same day value. The payment of withdrawals may be delayed in extraordinary circumstances, when the manager with the consent of the fund trustees deem this to be in the interest of all fund investors. These circumstances may include periods when significant underlying markets suspend trading which will prevent accurate valuation of the instruments held in the fund. When the suspension of trading relates to only certain assets held by the fund, these assets may be side-pocketed. This process allows normal liquidity on the assets that can be valued, but will delay liquidity on the affected portion of the fund. If the fund is faced with excessive withdrawals, the affected withdrawals may be ring-fenced, which is the separation and delayed sale of the assets reflecting the interest of the liquidity seeking investors. It ensures that the sale of a large number of units will not force Coronation to sell the underlying investments in a manner that may have a negative impact on remaining investors of the fund.

HOW WAS THE PERFORMANCE INFORMATION INCLUDED IN THIS FACT SHEET CALCULATED?

Performance is calculated by Coronation as at the last day of the month for a lump sum investment using Class A NAV prices with income distributions reinvested. All underlying price and distribution data is sourced from Morningstar. Performance figures are quoted after the deduction of all costs (including manager fees and trading costs) incurred within the fund. Note that individual investor performance may differ as a result of the actual investment date, the date of reinvestment of distributions and dividend withholding tax, where applicable. Annualised performance figures represent the geometric average return earned by the fund over the given time period. Unannualised performance represents the total return earned by the fund over the given time period, expressed as a percentage.

WHAT IS THE TOTAL EXPENSE RATIO (TER) AND TRANSACTION COSTS (TC)?

TER is calculated as a percentage of the average net asset value of the portfolio incurred as charges, levies and fees in the management of the portfolio. The TER charged by any underlying fund held as part of a fund's portfolio is included in the fund expenses portion of the TER, but trading and implementation costs incurred in managing the fund are excluded. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TER's. The 1 year TER is for the 12 months to end of September 2017 (updated annually). The 3 year TER is for a rolling 36-month period to the last quarter end (December, March, June and September).

Transaction costs are a necessary cost in managing a fund and impacts the fund's return. They should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund, the investment decisions of the investment manager and the TER.

The Total Investment Charge is the sum of the Total Expense Ratio (TER) and transaction costs.

ADVICE AND PLATFORM COSTS

Coronation does not provide financial advice. If you appoint an adviser, advice fees are contracted directly between you and the adviser. For more information please contact the relevant platform (Linked Investment Service Provider or Life Assurance Provider).

WHERE CAN I FIND ADDITIONAL INFORMATION?

Additional information such as daily fund prices, brochures, application forms and a schedule of fund fees and charges is available on our website, www.coronation.com
