

WHAT IS THE FUND'S OBJECTIVE?

The Money Market Fund aims to outperform one to three year fixed deposit and call accounts over time, while taking the lowest level of capital risk consistent with this objective.

WHAT DOES THE FUND INVEST IN?

The fund will only invest in South African money market instruments with a maturity of less than a year. These include a wide range of instruments issued by banks and other institutions. The fund has a limit of 120 days on the average maturity of its investments. The fund is mandated to use derivative instruments for efficient portfolio management purposes.

IMPORTANT PORTFOLIO CHARACTERISTICS AND RISKS

The fund is tactically managed to achieve the best possible return achievable from short maturity money market instruments, while aiming to protect capital at all times.

Our fixed income investment team researches the full spectrum of money market instruments to capture the best possible returns. The fund's investments are subjected to a strict risk management process.

While the low risk of losing money over all investment periods is reflected in the fund's constant daily price, an investment in the fund is not equivalent to a bank deposit account and losses are possible.

The return to the investor is made up of interest received plus or minus any gains or losses made on the underlying instruments held in the fund. In most cases, these gains or losses will merely increase or decrease the daily yield, but in the case of abnormal credit events impacting underlying holdings, the capital value of the portfolio may reduce.

HOW LONG SHOULD INVESTORS REMAIN INVESTED?

The recommended investment term is one month and longer.

Given its lack of exposure to growth assets, the fund is not suited for lengthy investment terms.

WHO SHOULD CONSIDER INVESTING IN THE FUND?

Investors who require:

- an alternative to bank deposits;
- a place to 'park' their savings for a short time;
- quick access to their money,
- a low-risk investment to diversify their portfolio;
- capital protection, but not capital growth.

WHAT COSTS CAN I EXPECT TO PAY?

An annual fee of 0.25% (excl. VAT) is payable.

Fund expenses that are incurred in the fund include trading, custody and audit charges. All performance information is disclosed after deducting all fees and other portfolio costs.

We do not charge fees to access or withdraw from the fund.

The price of each unit is aimed at a constant price of 100 cents per unit. The total return to the investor is primarily made up of interest received but, may also include any gain or loss made on any particular instrument. In most cases this will merely have the effect of increasing or decreasing the daily yield, but in an extreme case it can have the effect of reducing the capital value of the Fund.

Please note that the commentary is for the retail class of the fund.

The fund generated a return (net of management fees) of 1.8% for the quarter and 7.6% over a rolling 12-month period, which is ahead of the 3-month STeFI benchmark return of 6.9%.

The SARB Monetary Policy Committee (MPC) raised the repo rate by 25 basis points (bps) to 6.75%, despite downward revisions to both inflation and growth forecasts. The decision largely reflected the governor's consistent view about the need to anchor inflation expectations towards 4.5%, the midpoint of the target range. The vote was not, however, unanimous and shows that there are still a range of views represented on the committee.

CPI surprised to the upside, printing at 5.2% year-on-year (y/y) in November 2018. This print, however, does not change our benign inflation outlook given that the large retail fuel price cut in December was not surveyed. We currently expect inflation to peak at 5.6% in 2019, largely due to base effects, slightly higher food inflation and the effect of a weaker currency. This is still within the South African Reserve Bank's inflation target band and in addition, the general growth environment for the country remains weak, with the most recent GDP growth number at 1.1% y/y. Our current view is for another two 25 bps interest rate hikes over the course of 2019 to take the repo rate to 7.25% by year end. The market remains indifferent, with around a 50% chance of a single interest rate hike being priced over the next 12 months.

The 3-month JIBAR index, off which most of the floating rate instruments in the fund are priced, has increased to 7.2%, given the hike in the repo rate. This compares to an average rate of 7.0% for the prior period. All the floating rate instruments in the fund reset to the prevailing 3-month Jibar rate every three months post their initial investment date. As such, the increase in the Jibar rate should provide some uplift to the fund yield over the next quarter. Given our expectation for two further interest rate hikes over the next year, this bodes well for the fund's yield in 2019.

The last quarter has seen spreads on NCDs (Negotiable Certificates of Deposit) remain largely constant, breaking the trend of continued compression seen for most of 2018. The notable exception to this has been one-year NCD spreads, which continue to widen. A one-year fixed rate NCD is now being offered at 8.3%, which is attractive, given the return profile of the fund, provided that the duration restriction of the mandate is not breached.

The contraction in NCD credit spreads witnessed over the last year continues to be positive for the fund, although the benefit is only received when an NCD is sold back to the issuing bank. As such, there is no immediate yield uplift, but the benefit should materialise over time, as the fund routinely creates liquidity by trading in these instruments. Going forward, we continue to see the risks to NCD spreads as being broadly balanced, with the fund being well placed to handle adverse market moves.

A market we are carefully watching remains that of South African Treasury Bills. It was stated in the Medium Term Budget Policy Statement (MTPBS) that these instruments will play a greater role in government's funding requirements going forward. This increased supply will likely have an impact on Treasury Bill yields in future and, to a certain extent, we have already seen this starting to unfold. The yield on a 12 month Treasury Bill (8.4%) is now higher than that of a 12 month fixed rate bank NCD (8.3%). The Treasury Bill, in theory, comes with no credit risk but this must be considered relative to its more limited trading liquidity. Nonetheless, this yield is attractive for the fund and we will continue to explore this opportunity.

Credit issuance in the primary market remains limited, which is partly a function of the low-growth environment. The weakness in GDP growth remains particularly concerning for credit markets from an overall supply perspective. For the ten months ending October 2018, issuance from banks was down 44.7%, with corporate issuance down 16.7%. This weakness has been broad based as evidenced by weak asset growth numbers from the banking sector and subdued credit extension.

Our current GDP growth expectations are for 1.8% in 2019. This is, however, largely predicated on an improvement in consumption expenditure rather than increased fixed capital formation. This does not bode well for issuance levels. We remain cautious and continue to only invest in instruments which are attractively priced relative to their underlying risk profile. Capital preservation and liquidity remain our key focus areas.

IMPORTANT INFORMATION THAT SHOULD BE CONSIDERED BEFORE INVESTING IN THE CORONATION MONEY MARKET FUND

Unit trusts should be considered medium- to long-term investments. The value of units may go down as well as up, and therefore Coronation does not make any guarantees with respect to the protection of capital or returns. The Coronation Money Market fund is not a bank deposit account. The fund has a constant price (of 100 cents). The total return to the investor is made up of interest received and any gain or loss made on any particular instrument. In most cases the return will merely have the effect of increasing or decreasing the daily yield, but in the case of abnormal losses it can have the effect of reducing the capital value of the portfolio. The yield is calculated by taking the interest and income receivable of all the instruments in the fund divided by the net asset value, expressed as a nominal annual rate. It is provided to give an approximate indication of the achievable yield for an investment made at the reporting date. Actual experience may differ, based on changes in market values, interest rates and changes in costs actually experienced during the investment period. Coronation Management Company (RF) (Pty) Ltd is a Collective Investment Schemes Manager approved by the Financial Sector Conduct Authority in terms of the Collective Investment Schemes Control Act. Portfolio managed by Coronation Asset Management (Pty) (FSP 548) Ltd, an authorised financial services provider. The Management Company reserves the right to close the fund to new investors if we deem it necessary to limit further inflows in order for it to be managed in accordance with its mandate. Unit trusts are allowed to engage in scrip lending and borrowing. Standard Chartered has been appointed as trustees for the fund (www.sc.com/za; 011-2176600). Coronation is a full member of the Association for Savings & Investment SA (ASISA).

HOW ARE UNITS PRICED AND AT WHICH PRICE WILL MY TRANSACTION BE EXECUTED?

Unit trusts are traded at ruling prices set on every trading day. Fund valuations take place at approximately 15h00 each business day, except at month end when the valuation is performed at approximately 17h00 (JSE market close) and forward pricing is used. Instructions must reach the Management Company before 14h00 (12h00 for the Money Market Fund) to ensure same day value. The payment of withdrawals may be delayed in extraordinary circumstances, when the manager with the consent of the fund trustees deem this to be in the interest of all fund investors. These circumstances may include periods when significant underlying markets suspend trading which will prevent accurate valuation of the instruments held in the fund. When the suspension of trading relates to only certain assets held by the fund, these assets may be side-pocketed. This process allows normal liquidity on the assets that can be valued, but will delay liquidity on the affected portion of the fund. If the fund is faced with excessive withdrawals, the affected withdrawals may be ring-fenced, which is the separation and delayed sale of the assets reflecting the interest of the liquidity seeking investors. It ensures that the sale of a large number of units will not force Coronation to sell the underlying investments in a manner that may have a negative impact on remaining investors of the fund.

HOW WAS THE PERFORMANCE INFORMATION INCLUDED IN THIS FACT SHEET CALCULATED?

Performance is calculated by Coronation as at the last day of the month for a lump sum investment using Class A NAV prices with income distributions reinvested. All underlying price and distribution data is sourced from Morningstar. Performance figures are quoted after the deduction of all costs (including manager fees and trading costs) incurred within the fund. Note that individual investor performance may differ as a result of the actual investment date, the date of reinvestment of distributions and dividend withholding tax, where applicable. Annualised performance figures represent the geometric average return earned by the fund over the given time period. Unannualised performance represents the total return earned by the fund over the given time period, expressed as a percentage.

WHAT IS THE TOTAL EXPENSE RATIO (TER) AND TRANSACTION COSTS (TC)?

TER is calculated as a percentage of the average net asset value of the portfolio incurred as charges, levies and fees in the management of the portfolio. The TER charged by any underlying fund held as part of a fund's portfolio is included in the fund expenses portion of the TER, but trading and implementation costs incurred in managing the fund are excluded. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TER's. The 1 year TER is for the 12 months to end of September 2018 (updated annually). The 3 year TER is for a rolling 36-month period to the last quarter end (December, March, June and September).

Transaction costs are a necessary cost in managing a fund and impacts the fund's return. They should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund, the investment decisions of the investment manager and the TER.

The Total Investment Charge is the sum of the Total Expense Ratio (TER) and transaction costs.

ADVICE AND PLATFORM COSTS

Coronation does not provide financial advice. If you appoint an adviser, advice fees are contracted directly between you and the adviser. For more information please contact the relevant platform (Linked Investment Service Provider or Life Assurance Provider).

WHERE CAN I FIND ADDITIONAL INFORMATION?

Additional information such as daily fund prices, brochures, application forms and a schedule of fund fees and charges is available on our website, www.coronation.com
