

WHAT IS THE FUND'S OBJECTIVE?

Strategic Income aims to achieve a higher return than a traditional money market or pure income fund.

WHAT DOES THE FUND INVEST IN?

Strategic Income can invest in a wide variety of assets, such as cash, government and corporate bonds, inflation-linked bonds and listed property, both in South Africa and internationally.

As great care is taken to protect the fund against loss, Strategic Income does not invest in ordinary shares and its combined exposure to locally listed property (typically max. 10%), local preference shares (typically max. 10%), local hybrid instruments (typically max. 5%) and international assets (typically max. 10%) would generally not exceed 25% of the fund.

The fund has a flexible mandate with no prescribed maturity or duration limits for its investments. The fund is mandated to use derivative instruments for efficient portfolio management purposes.

IMPORTANT PORTFOLIO CHARACTERISTICS AND RISKS

Risk Profile

Maximum growth/
minimum income exposures

Strategic Income is tactically managed to secure an attractive return, while protecting capital.

Its investments are carefully researched by a large and experienced investment team and subjected to a strict risk management process. The fund is actively positioned to balance long-term strategic positions with shorter-term tactical opportunities to achieve the best possible income.

While the fund is managed in a conservative and defensive manner, there are no guarantees it will always outperform cash over short periods of time. Capital losses are possible, especially in the case of negative credit events affecting underlying holdings.

HOW LONG SHOULD INVESTORS REMAIN INVESTED?

The recommended investment term is 12-months and longer. The fund's exposure to growth assets like listed property and preference shares will cause price fluctuations from day to day, making it unsuitable as an alternative to a money market fund over very short investment horizons (12-months and shorter). Note that the fund is also less likely to outperform money market funds in a rising interest rate environment.

Given its limited exposure to growth assets, the fund is not suited for investment terms of longer than five years.

WHO SHOULD CONSIDER INVESTING IN THE FUND?

Investors who

- ▶ are looking for an intelligent alternative to cash or bank deposits over periods from 12 to 36 months;
- ▶ seek managed exposure to income generating investments;
- ▶ are believers in the benefits of active management within the fixed interest universe.

WHAT COSTS CAN I EXPECT TO PAY?

An annual fee of 0.85% (excl. VAT) is payable.

Fund expenses that are incurred in the fund include trading, custody and audit charges. All performance information is disclosed after deducting all fees and other fund costs.

We do not charge fees to access or withdraw from the fund.

Please note that the commentary is for the retail class of the fund.

The fund returned 1.5% in May, bringing its total return to 4.6% for the 12-month period. Local bonds delivered great performance during May, rebounding from a low base in April. The All Bond Index returned 7.1%, with the long-term bonds (seven to 12 years) delivering the best return at 9.4%, while short-dated bonds returned 1.1%, and bonds with a maturity of three to seven years returned 4.4%. The long end of the curve (12+ years) was up 8.32%, inflation-linked bonds (ILBs) had an average month returning 1.1%, and cash earnings were slightly lower at 0.45%, reflecting the recent rate cuts.

The effects of Covid-19 are still playing out in the global economy, as the second quarter of 2020 (Q2-20) has seen countries slowly easing restrictions and economic activity picking up moderately. With data indicating growth under extreme pressure, central banks continue to expand quantitative easing to provide relief to households and corporates. Oil prices recovered slightly in May, but inflation pressure remains low.

The market expects the Federal Reserve Board (the Fed) to shift to a medium-term inflation target policy coupled with an open-ended quantitative easing programme at its meeting in June. At the last meeting, Fed Chair Colin Powell noted that negative interest rates are not yet a consideration for the US and that asset purchases would continue 'as needed'. He also highlighted the limitations of monetary policy in a crisis such as this and called for further fiscal support. US headline inflation fell to 0.3% year on year (y/y) in April from 1.5% y/y in March. The decline was due to lower energy, fuel, apparel, services, transport and recreation prices. Producer price inflation (PPI) contracted -1.2% y/y in April from 0.7% y/y in May. With unemployment rates rising across the US, inflation pressures are expected to remain low.

In emerging markets, China's economic activity picked up on the back of eased lockdown restrictions. Headline inflation decreased to 3.3% y/y in April versus 4.3% y/y in March. The National People's Congress of China did not commit to a growth target for the year but announced additional fiscal support in excess of market expectations. Total fiscal support is now estimated at 4.8% of GDP, concentrated in tax and fee reductions, and an additional 2% of GDP emergency funding for Covid-19 economic recovery, mainly for infrastructure. Elsewhere in emerging markets the impact of Covid-19 on growth is still evolving. A range of central banks have announced lower interest rates and active (or intentions to) interventions in government bond markets through quantitative easing programmes. Broadly, emerging market inflation should moderate in the coming months due to lower oil prices, although significantly weaker currencies pose some threat to inflation in the longer term.

The rand was stronger, as it gained 5.6% against the US dollar, ending May at US\$1/R17.55. The easing of lockdown measures globally and initial indications that the expected contraction would not be as severe as initially thought, serve to buoy risk sentiment and EM currencies. However, the local fundamental backdrop remains quite poor. The fund maintains its healthy exposure to offshore assets and, when valuations are stretched, will hedge/unhedge portions of its exposure back into rands/dollars by selling/buying JSE-traded currency futures (US dollars, UK pounds and euros). These instruments are used to adjust the fund's exposure synthetically, allowing it to maintain its core holdings in offshore assets.

The South African Reserve Bank (SARB) cut the repo rate by 50 basis points (bps) to 3.75% at its May monetary policy meeting. The vote was split with three members voting for a 50bps cut and two members preferring 25bps. This could signal a moderation in the increment of rate cuts going forward. We expect the SARB to cut the repo rate again in July, with a greater probability of 25bps. The May SARB forecast GDP contraction of 7% in 2020 and a gradual recovery in 2021 and 2022, with GDP growth of 3.8% and 2.9%, respectively.

Furthermore, the SARB is expecting inflation to average 3.4% in 2020, to rebound to 4.4% in 2021 and 2022, somewhat higher than our forecasts. Overall the SARB policy stance remains conservative, and recent comments from the Governor suggest any market interventions will be implemented to avoid dislocation rather than actively aiming to reduce long-term interest

rates. Business activity, having collapsed sharply during the hard lockdown in April, showed some signs of recovery in May. The ABSA Purchasing Managers Index ticked up, and the Business Activity Index, which is broadly analogous to output, recovered markedly to 43.2 points in May after falling to a record low of 5.1 points in April. Vehicle sales were less negative in May after a collapse in April. Overall, however, there is little hard data to go by.

At the end of February, shorter dated fixed-rate negotiable certificates of deposit (NCDs) traded at 5.56% (three-year) and 6.60% (five-year), much lower than the previous month. Shorter dated NCDs have pulled lower due to the significant interest rate cuts, while the five-year levels have pulled wider, due to the recovery in bond yields. Short-dated fixed-rate NCDs continue to hold appeal due to the inherent protection offered by their yields and relative to our expectations for a lower repo rate. In addition, NCDs have the added benefit of being liquid, thus aligning the liquidity of the fund with the needs of its investors. The fund continues to hold decent exposure to these instruments (less floating than fixed), but we will remain cautious and selective when increasing exposure.

The overall impact of this crisis on growth and government finances is likely to be severe, and the effects of lockdown and poor policy choices will weigh heavily on the economy going forward. As South Africa's economy was not well positioned going into the crisis, strong reforms are needed to return the country to a structurally better growth path, although lower interest rates will lend support to the economy through this difficult phase. South African Government Bonds do embed a decent risk premium relative to cash and their emerging market peers, albeit, this premium has compressed with the recent rally in bond yields. The risk that South Africa will fall into a debt trap remains high, but valuation does provide some offset to this, implying that local bonds do warrant at least a neutral allocation in portfolios.

The local listed-property sector was down 0.5% over May, bringing its return for the rolling 12-month period to -45.4%. Listed property has been the largest drag on the fund's performance. This has resulted in a general rise in balance-sheet risk across the sector. The current crisis will reduce rental income, put pressure on asset values, increase the cost of borrowing for lower-quality businesses, and test inexperienced management teams. It is entirely possible that most of the companies will require additional capital and that dividends are suspended to preserve capital. One must be cautious not to take these at face value and understand how the key issues mentioned above affect that yield. We believe there are a few select large-cap counters that satisfy our stringent conditionality.

The FTSE/JSE Preference Share Index was down 2% over May, bringing its 12-month return to -13.9%. Preference shares offer a steady dividend yield linked to the prime rate and, depending on the risk profile of the issuer, currently yield between 9% and 11% (subject to a 20% Dividends Tax, depending on the investor entity). The change in capital structure requirements mandated by Basel III will discourage banks from issuing preference shares. This will limit availability. In addition, most of the bank-related preference shares trade at a discount, which enhances their attractiveness for holders from a total return perspective and increases the likelihood of bank buybacks. Despite attractive valuations, this asset class will continue to dissipate, given the lack of new issuance and because it risks being classified as eligible loss-absorbing capital (only senior to equity). The fund maintains select exposure to certain high-quality corporate preference shares, but will not actively look to increase its holdings.

We remain vigilant of the risks emanating from the dislocations between stretched valuations and the underlying fundamentals of the local economy. However, we believe that the fund's current positioning correctly reflects appropriate levels of caution. The fund's yield of 6.80% (gross of fees) remains attractive relative to its duration risk. We continue to believe that this yield is an adequate proxy for expected fund performance over the next 12 months. As is evident, we remain cautious in our management of the fund. We continue to invest only in assets and instruments that we believe have the correct risk and term premium to limit investor downside and enhance yield.

IMPORTANT INFORMATION THAT SHOULD BE CONSIDERED BEFORE INVESTING IN THE CORONATION STRATEGIC INCOME FUND

Unit trusts should be considered medium- to long-term investments. The value of units may go down as well as up, and therefore Coronation does not make any guarantees with respect to the protection of capital or returns. Past performance is not necessarily an indication of future performance. The fund is mandated to invest up to 10% of its portfolio into foreign securities and may as a result be exposed to macroeconomic, settlement, political, tax, reporting or illiquidity risk factors that may be different to similar investments in the South African markets. Fluctuations or movements in exchange rates may cause the value of underlying investments to go up or down. Asset allocation and top 10 holdings are not reflected on a look-through basis. The fund is managed in line with Regulation 28 limits, although it is not required as per the fund's supplemental deed. The yield shown is an estimate in part based on market assumptions and forecasts. The yield is calculated by taking the interest and income receivable of all the instruments in the fund divided by the net asset value, expressed as a nominal annual rate. It is provided to give an approximate indication of the achievable yield for an investment made at the reporting date. Actual experience may differ, based on changes in market values, interest rates and changes in costs actually experienced during the investment period.

Coronation Management Company (RF) (Pty) Ltd is a Collective Investment Schemes Manager approved by the Financial Sector Conduct Authority in terms of the Collective Investment Schemes Control Act. Portfolio managed by Coronation Asset Management (Pty) (FSP 548) Ltd, an authorised financial services provider. The Management Company reserves the right to close the fund to new investors if we deem it necessary to limit further inflows in order for it to be managed in accordance with its mandate. Unit trusts are allowed to engage in scrip lending and borrowing. Standard Chartered has been appointed as trustees for the fund (www.sc.com/za; 011-2176600). Coronation is a full member of the Association for Savings & Investment SA (ASISA).

HOW ARE UNITS PRICED AND AT WHICH PRICE WILL MY TRANSACTION BE EXECUTED?

Unit trusts are traded at ruling prices set on every trading day. Fund valuations take place at approximately 15h00 each business day, except at month end when the valuation is performed at approximately 17h00 (JSE market close) and forward pricing is used. Instructions must reach the Management Company before 14h00 (12h00 for the Money Market Fund) to ensure same day value. The payment of withdrawals may be delayed in extraordinary circumstances, when the manager with the consent of the fund trustees deem this to be in the interest of all fund investors. These circumstances may include periods when significant underlying markets suspend trading which will prevent accurate valuation of the instruments held in the fund. When the suspension of trading relates to only certain assets held by the fund, these assets may be side-pocketed. This process allows normal liquidity on the assets that can be valued, but will delay liquidity on the affected portion of the fund. If the fund is faced with excessive withdrawals, the affected withdrawals may be ring-fenced, which is the separation and delayed sale of the assets reflecting the interest of the liquidity seeking investors. It ensures that the sale of a large number of units will not force Coronation to sell the underlying investments in a manner that may have a negative impact on remaining investors of the fund.

HOW WAS THE PERFORMANCE INFORMATION INCLUDED IN THIS FACT SHEET CALCULATED?

Performance is calculated by Coronation as at the last day of the month for a lump sum investment using Class A NAV prices with income distributions reinvested. All underlying price and distribution data is sourced from Morningstar. Performance figures are quoted after the deduction of all costs (including manager fees and trading costs) incurred within the fund. Note that individual investor performance may differ as a result of the actual investment date, the date of reinvestment of distributions and dividend withholding tax, where applicable. Annualised performance figures represent the geometric average return earned by the fund over the given time period. Unannualised performance represents the total return earned by the fund over the given time period, expressed as a percentage.

WHAT IS THE TOTAL EXPENSE RATIO (TER) AND TRANSACTION COSTS (TC)?

TER is calculated as a percentage of the average net asset value of the portfolio incurred as charges, levies and fees in the management of the portfolio. The TER charged by any underlying fund held as part of a fund's portfolio is included in the fund expenses portion of the TER, but trading and implementation costs incurred in managing the fund are excluded. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TER's. The 1 year TER is for the 12 months to end of September 2019 (updated annually). The 3 year TER is for a rolling 36-month period to the last quarter end (December, March, June and September).

Transaction costs are a necessary cost in managing a fund and impacts the fund's return. They should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund, the investment decisions of the investment manager and the TER.

The Total Investment Charge is the sum of the Total Expense Ratio (TER) and transaction costs.

ADVICE AND PLATFORM COSTS

Coronation does not provide financial advice. If you appoint an adviser, advice fees are contracted directly between you and the adviser. For more information please contact the relevant platform (Linked Investment Service Provider or Life Assurance Provider).

WHERE CAN I FIND ADDITIONAL INFORMATION?

Additional information such as daily fund prices, brochures, application forms and a schedule of fund fees and charges is available on our website, www.coronation.com
