

WHAT IS THE FUND'S OBJECTIVE?

The fund aims to maximise long-term growth from investing in a select group of resource companies. It seeks to outperform an index of resource companies listed on the Johannesburg Stock Exchange (the JSE Resources Index) over the longer term.

WHAT DOES THE FUND INVEST IN?

The fund will remain fully invested in a broad range of resource and basic materials industry shares that are affected by changes in the commodity cycle. This includes companies involved in mining, minerals, energy, natural resources and other commodities. The fund is mandated to use derivative instruments for efficient portfolio management purposes.

IMPORTANT PORTFOLIO CHARACTERISTICS AND RISKS

Risk Profile

Maximum growth/
minimum income exposures

The fund's managers actively seek out attractively valued companies that could offer strong long-term growth. The fund reflects Coronation's best investment views in the resource sector.

Shares are selected following rigorous research into the long-term potential of a company. Shares can be volatile investments, and the cyclical demand for commodities can add to the risk of capital loss.

The fund is concentrated and only invests in one sector of the market, making it riskier than a general equity fund.

HOW LONG SHOULD INVESTORS REMAIN INVESTED?

The fund is managed to deliver the best possible returns over the long term; an investment horizon of five years or more is therefore ideal.

WHO SHOULD CONSIDER INVESTING IN THE FUND?

Investors who are building wealth and

- want to diversify their investments to include specific exposure to the resource sector;
- believe that resource shares offer compelling value;
- accept the cyclical nature of commodity demand and the resulting increased risk of short-term losses;
- want to hold the Resources Fund as one of multiple funds in their investment portfolio.

WHAT COSTS CAN I EXPECT TO PAY?

An annual fee of 1.00% (excl. VAT) is payable.

Fund expenses that are incurred in the fund include trading, custody and audit charges. All performance information is disclosed after deducting all fees and other portfolio costs.

We do not charge fees to access or withdraw from the fund.

The Fund returned 26.7% for the quarter and 53.1% for the last 12 months. The Fund's long-term performance remains pleasing against both the peer group and the benchmark.

During the fourth quarter of 2021 (Q4-21), the biggest contributor to performance was our overweight position in RB Plat, followed by our underweight in Sasol. Our Exxaro overweight and BHP Billiton underweight detracted.

The major news of the last quarter was the ongoing potential takeout of RB Plat, with both Northam and Impala vying for control. Initially, Impala announced they were in talks to acquire RB Plat. Subsequently, Northam surprised the market by buying RB Plat's parent company's 34.9% stake in RB Plat for R180 per share. Impala subsequently bought stakes from other shareholders and now sits with circa 35% of RB Plat shares. Immediately prior to the announcement, our RB Plat stake represented just under 11% of the Fund (the maximum permissible position size). The bun fight over the business supports our view around the quality of its assets and its valuation attractiveness. With the share price having run from R90 to over R150, we sold our RB Plat stake during the quarter.

We are somewhat uncomfortable with Northam paying R180 per RB Plat share, with Impala paying closer to the R150 level for their stake. Impala has contiguous operations to RB Plat and is able to extract meaningful synergies. Northam's operations are far from RB Plat, and it has no such opportunities. As a result, Impala should be able to offer a higher price than Northam, and our concern is that Northam overpays for the remaining stake, should they pursue this avenue. A primary concern of ours regarding the potential Northam acquisition is the relative size of RB Plat compared to Northam and the impact this has on the affordability of the transaction. Impala was able to fund a large portion of the acquisition from their substantial cash reserves. We deployed our RB Plat proceeds into Impala and reduced our Northam position size.

The gold price and gold equities performed well over the quarter. Investors grew increasingly concerned that the high levels of inflation we have seen will prove to be persistent and not transitory. This, coupled with concerns that the Fed is behind the curve in hiking rates to curb inflation, provided a buoyant environment for gold. Goldfields and AngloGold advanced c40% over the quarter. We switched some of our AngloGold and Goldfields positions into Pan African Resources, given relative performance and increased margin of safety in the latter.

Iron ore prices fell precipitously over the preceding quarter and Q4-21. Chinese steel production fell due to industrial production curtailment (bought on by intermittent electricity due to limited coal availability), a desire to curb air pollution/carbon emissions and attempts to cool property development, which the government is concerned is overheating. Iron ore prices fell from over \$200/t and bottomed at \$95/t. They have since corrected to \$125/t as Chinese steel production appears to have troughed. Despite the fall, we consider \$125/t a high price, with large producers still making very good money at these prices. This includes Kumba Iron Ore, Exxaro (via its stake in Kumba) and BHP Billiton.

Coal stocks (Exxaro and Thungela) came under pressure as coal prices corrected from extremely high levels. Coal started the quarter at \$195/t and ended at around the \$140/t level. Like iron ore, we still regard \$140/t as a compelling price for producers. We added to both stocks during Q4-21. Thungela is high cost and short-lived, but its price is compelling on a two to three times PE. We have noted Exxaro's capital allocation concerns in the past, but on a dividend yield of more than 10% and a free cash flow yield of more than 20%, we think the market has become too pessimistic on its prospects.

IMPORTANT INFORMATION THAT SHOULD BE CONSIDERED BEFORE INVESTING IN THE CORONATION RESOURCES FUND

The Resources Fund should be considered a long-term investment. The value of units may go down as well as up, and therefore Coronation does not make any guarantees with respect to the protection of capital or returns. Past performance is not necessarily an indication of future performance. The fund is mandated to invest up to 25% (excluding Africa) of its portfolio into foreign securities and may as a result be exposed to macroeconomic, settlement, political, tax, reporting or illiquidity risk factors that may be different to similar investments in the South African markets. Fluctuations or movements in exchange rates may cause the value of underlying investments to go up or down. Asset allocation and top 10 holdings are reflected on a look-through basis. Any African exposure (ex SA) is reflected under international assets. Coronation Management Company (RF) (Pty) Ltd is a Collective Investment Schemes Manager approved by the Financial Sector Conduct Authority in terms of the Collective Investment Schemes Control Act. Portfolio managed by Coronation Asset Management (Pty) (FSP 548) Ltd, an authorised financial services provider. The Management Company reserves the right to close the fund to new investors if we deem it necessary to limit further inflows in order for it to be managed in accordance with its mandate. Unit trusts are allowed to engage in scrip lending and borrowing. Standard Chartered has been appointed as trustees for the fund (www.sc.com/za; 011-2176600). Coronation is a full member of the Association for Savings & Investment SA (ASISA).

HOW ARE UNITS PRICED AND AT WHICH PRICE WILL MY TRANSACTION BE EXECUTED?

Unit trusts are traded at ruling prices set on every trading day. Fund valuations take place at approximately 15h00 each business day, except at month end when the valuation is performed at approximately 17h00 (JSE market close) and forward pricing is used. Instructions must reach the Management Company before 14h00 (12h00 for the Money Market Fund) to ensure same day value. The payment of withdrawals may be delayed in extraordinary circumstances, when the manager with the consent of the fund trustees deem this to be in the interest of all fund investors. These circumstances may include periods when significant underlying markets suspend trading which will prevent accurate valuation of the instruments held in the fund. When the suspension of trading relates to only certain assets held by the fund, these assets may be side-pocketed. This process allows normal liquidity on the assets that can be valued, but will delay liquidity on the affected portion of the fund. If the fund is faced with excessive withdrawals, the affected withdrawals may be ring-fenced, which is the separation and delayed sale of the assets reflecting the interest of the liquidity seeking investors. It ensures that the sale of a large number of units will not force Coronation to sell the underlying investments in a manner that may have a negative impact on remaining investors of the fund.

HOW WAS THE PERFORMANCE INFORMATION INCLUDED IN THIS FACT SHEET CALCULATED?

Performance is calculated by Coronation as at the last day of the month for a lump sum investment using Class P NAV prices with income distributions reinvested. All underlying price and distribution data is sourced from Morningstar. Performance figures are quoted after the deduction of all costs (including manager fees and trading costs) incurred within the fund. Note that individual investor performance may differ as a result of the actual investment date, the date of reinvestment of distributions and dividend withholding tax, where applicable. Annualised performance figures represent the geometric average return earned by the fund over the given time period. Unannualised performance represents the total return earned by the fund over the given time period, expressed as a percentage.

BENCHMARK DETAILS

The benchmark used for performance purposes is the FTSE/JSE Resources Index.

Note that we use the FTSE/JSE Africa Resource 10 Index for compliance monitoring purposes.

WHAT IS THE TOTAL EXPENSE RATIO (TER) AND TRANSACTION COSTS (TC)?

TER is calculated as a percentage of the average net asset value of the portfolio incurred as charges, levies and fees in the management of the portfolio. The TER charged by any underlying fund held as part of a fund's portfolio is included in the fund expenses portion of the TER, but trading and implementation costs incurred in managing the fund are excluded. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TER's. The 1 year TER is for the 12 months to end of the current financial year (updated annually). The 3 year TER is for a rolling 36-month period to the last quarter end (December, March, June and September).

Transaction costs are a necessary cost in managing a fund and impacts the fund's return. They should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund, the investment decisions of the investment manager and the TER.

The Total Investment Charge is the sum of the Total Expense Ratio (TER) and transaction costs.

ADVICE AND PLATFORM COSTS

Coronation does not provide financial advice. If you appoint an adviser, advice fees are contracted directly between you and the adviser. For more information please contact the relevant platform (Linked Investment Service Provider or Life Assurance Provider).

WHERE CAN I FIND ADDITIONAL INFORMATION?

Additional information such as daily fund prices, brochures, application forms and a schedule of fund fees and charges is available on our website, www.coronation.com
