

WHAT IS THE FUND'S OBJECTIVE?

Strategic Income aims to achieve a higher return than a traditional money market or pure income fund.

WHAT DOES THE FUND INVEST IN?

Strategic Income can invest in a wide variety of assets, such as cash, government and corporate bonds, inflation-linked bonds and listed property, both in South Africa and internationally.

As great care is taken to protect the fund against loss, Strategic Income does not invest in ordinary shares and its combined exposure to locally listed property (typically max. 10%), local preference shares (typically max. 10%), local hybrid instruments (typically max. 5%) and international assets (typically max. 10%) would generally not exceed 25% of the fund.

The fund has a flexible mandate with no prescribed maturity or duration limits for its investments. The fund is mandated to use derivative instruments for efficient portfolio management purposes.

IMPORTANT PORTFOLIO CHARACTERISTICS AND RISKS

Risk Profile

Maximum growth/
minimum income exposures

Strategic Income is tactically managed to secure an attractive return, while protecting capital.

Its investments are carefully researched by a large and experienced investment team and subjected to a strict risk management process. The fund is actively positioned to balance long-term strategic positions with shorter-term tactical opportunities to achieve the best possible income.

While the fund is managed in a conservative and defensive manner, there are no guarantees it will always outperform cash over short periods of time. Capital losses are possible, especially in the case of negative credit events affecting underlying holdings.

HOW LONG SHOULD INVESTORS REMAIN INVESTED?

The recommended investment term is 12-months and longer. The fund's exposure to growth assets like listed property and preference shares will cause price fluctuations from day to day, making it unsuitable as an alternative to a money market fund over very short investment horizons (12-months and shorter). Note that the fund is also less likely to outperform money market funds in a rising interest rate environment.

Given its limited exposure to growth assets, the fund is not suited for investment terms of longer than five years.

WHO SHOULD CONSIDER INVESTING IN THE FUND?

Investors who

- ▶ are looking for an intelligent alternative to cash or bank deposits over periods from 12 to 36 months;
- ▶ seek managed exposure to income generating investments;
- ▶ are believers in the benefits of active management within the fixed interest universe.

WHAT COSTS CAN I EXPECT TO PAY?

The annual management fee is 0.65%.

The annual management fee will reduce from 0.85% to 0.65% for the twelve-month period starting 1 April 2021 and ending 31 March 2022. From 1 April 2022, the management fee will be 0.75%.

Fund expenses that are incurred in the fund include trading, custody and audit charges. All performance information is disclosed after deducting all fees and other fund costs.

We do not charge fees to access or withdraw from the fund.

More detail is available on www.coronation.com.

Please note that the commentary is for the retail class of the Fund.

The Fund returned 0.59% in November, bringing its 12-month total return to 6.14%. This return is ahead of cash (3.53%) and that of its benchmark (3.88%).

Local bonds had a lacklustre performance in November. The FTSE/JSE All Bond Index returned 0.66% for the month; supported by medium-term bonds (3-7 years), which returned 1.25%. The long-term (7-12 years) part of the curve delivered 0.32% and the back end of the curve (12+ years) returned 0.56%. Short-term bonds (1-3 years) delivered 1.16%. Cash returns came in at 0.29% and inflation linked bonds (ILBs) returned -0.08%.

November was dominated by surging inflation reports as energy prices continue to increase across the globe. Medium-term inflation risks have shifted to the upside, as sticky bottlenecks prevail, exacerbated by constrained supply chains, a new Covid-19 variant, high primary commodity prices, and labour shortages in the US and parts of Europe. While the full impact of the new variant is unclear, the impact is likely to pose a headwind to the ongoing recovery.

In the US, headline inflation in October reached a high of 6.2% year on year (y/y) vs 5.4% y/y in September. Core inflation increased to 4.6% y/y in October from 4.0% y/y in September. The inflation uptick was largely a result of increasing energy prices and ongoing price pressure coming from food and used vehicle inflation. With the spike in inflation broadening out across sectors and showing no signs of moderating, Federal Reserve Board (the Fed) Chairman Jerome Powell has conceded that these are unlikely to be 'temporary'. On balance, the Fed is likely to withdraw quantitative easing and, ultimately, hike rates sooner than was signalled by the Federal Open Market Committee, both of which have been anticipated by the market.

In emerging markets, China's headline inflation increased to 1.5% y/y in October vs 0.7% y/y in September. The inflation pick-up reflects non-food prices, transport and communication inflation. Core inflation increased slightly to 1.3% y/y in October from 1.2% y/y in September. Worryingly, producer price inflation surged to 13.5% y/y in October from 10.7% y/y in September. This steep increase reflects a spike in the cost of raw materials and widening power shortages.

In South Africa, the Minister of Finance, Mr Enoch Godongwana, tabled the Medium-Term Budget Policy Statement (MTBPS) in early November after an election-related delay. The MTBPS made reasonable revenue and growth assumptions, but very few new baseline expenditure allocations. An 'unallocated reserve' was put in place to provide a cushion for expenditure risk and possibly strengthen National Treasury's bargaining position. Nonetheless, all big decisions were deferred to the February 2022 budget. The main budget deficit as a % of GDP is now projected at 6.6% for 2021/2022 down from 9.9% in 2020/2021 and is expected to narrow to 4.9% of GDP by 2024/2025. National Treasury's estimated debt to GDP ratio remains elevated and above consensus, with a primary budget surplus forecast for 2024/2025, and debt stabilisation only thereafter. The medium-term outlook remains constrained by large spending commitments and weak economic growth.

The rand ended the quarter at R15.89/US\$1. The cyclical tailwinds from strong commodity prices are starting to fade and the rand lies at the mercy of global risk appetite. Omnicron, and its impact on global growth came under the spotlight towards the end of November, which was a drag on the rand's performance. The Fund maintains its healthy exposure to offshore assets. When valuations are stretched, it will hedge/unhedge portions of its exposure back into rands/dollars by selling/buying JSE-traded currency futures (US dollars, UK pounds and euros). These instruments are used to adjust the Fund's exposure synthetically, allowing it to maintain its core holdings in offshore assets.

The South African Reserve Bank (SARB) hiked the repo rate by 25 basis points (bps), moving it from 3.5% to 3.75%. The hike reflects the Monetary Policy Committee's concerns about upside risks to the inflation outlook against very accommodative monetary policy settings and risks associated with tighter global monetary conditions. The SARB revised its inflation forecasts marginally upwards to factor in the short-term rising fuel prices and, to a lesser degree, the weak currency, but sees risk to its broader inflation forecast are on the upside. Despite this, risks to the growth outlook are assessed to be to the downside, stemming mostly from uncertainty related to electricity supply and the July unrest on business confidence and job creation. The SARB is expected to follow a gradual rate hiking cycle aimed at keeping inflation expectations anchored.

Both headline and core inflation were unchanged from the previous month at 5.0% y/y in October, and 3.2% y/y, respectively. October was a low survey month, and the data reflect moderate price increases for food and energy. Looking ahead, we expect price pressures from food and energy to persist, and some price increases in goods affected by supply constraints is also increasingly likely.

At the end of November, shorter-dated fixed-rate negotiable certificates of deposit (NCDs) traded at 6.78% (three-year) and 7.71% (five-year), materially lower than the close at the end of the previous month, due to the repricing in SARB interest rate expectations. SA's more moderate inflation expectations suggest that current pricing of these instruments remains attractive due to their lower modified duration and, hence, high breakeven relative to cash. In addition, NCDs have the added benefit of being liquid, thus aligning the Fund's liquidity with the needs of its investors. The Fund continues to hold decent exposure to these instruments (fewer floating than fixed), but we will remain cautious and selective when increasing exposure.

The prospects for the local economy have improved as reform progress has gathered momentum and global developments have provided tailwinds to the local recovery. Inflation is moving higher but should remain under control despite uneasiness around global inflation. The recovery in growth should gain more traction and spill into next year, which will provide more breathing space for the fiscus. Despite their recovery in the second quarter of 2021, SA government bonds (SAGBs), still embed a significant risk premium relative to cash. The steepness of the yield curve makes the 12- to 15-year area attractive, even if the local rate hiking cycle starts sooner than expected. For bond portfolios, we continue to advocate overweight positions to SAGBs focused in the 12- to 15-year area of the curve and allocations to ILBs with a maturity of less than eight years.

The local listed property sector was up 2.2% over November, bringing its 12-month return to 44.3%. The balance sheet concerns coming out of the Covid-19 crisis have subsided somewhat as companies have managed to introduce dividend payout ratios (with some withholding dividends entirely) and sell off assets. Going forward, operational performance will remain in the spotlight as an indicator of the pace and depth of the sector's recovery. We believe that one must remain cautious, given the high levels of uncertainty around the strength and durability of the local recovery. However, certain counters are showing value, given their unique capital structures and earnings potential. These counters remain a core holding within the Fund.

The FTSE/JSE Preference Share Index was down 0.7% over the month, bringing its 12-month return to 45.6%. The most recent performance has been bolstered by an announcement by the banks of their intent to repurchase a significant portion of their outstanding preference shares. Preference shares offer a steady dividend yield linked to the prime rate and, depending on the risk profile of the issuer, currently yield between 8% and 10% (subject to a 20% Dividends Tax, depending on the investor entity). The change in capital structure requirements mandated by Basel III will discourage banks from issuing preference shares, which will limit availability. Due to the reduced liquidity in this asset class and other instruments, at the same point in the capital structure, trading at more attractive valuations, the Fund will not look to increase its holdings and will maintain its current small exposure to specific corporate preference shares.

We remain vigilant of the risks emanating from the dislocations between stretched valuations and the local economy's underlying fundamentals. However, we believe that the Fund's current positioning correctly reflects appropriate levels of caution. The Fund's yield of 6.95% remains attractive relative to its duration risk. We continue to believe that this yield is an adequate proxy for expected Fund performance over the next 12 months.

As is evident, we remain cautious in our management of the Fund. We continue to invest only in assets and instruments that we believe have the correct risk and term premium to limit investor downside and enhance yield.

IMPORTANT INFORMATION THAT SHOULD BE CONSIDERED BEFORE INVESTING IN THE CORONATION STRATEGIC INCOME FUND

Unit trusts should be considered medium- to long-term investments. The value of units may go down as well as up, and therefore Coronation does not make any guarantees with respect to the protection of capital or returns. Past performance is not necessarily an indication of future performance. The fund is mandated to invest a portion of its portfolio (typically up to a maximum of 10%) into foreign securities and may as a result be exposed to macroeconomic, settlement, political, tax, reporting or illiquidity risk factors that may be different to similar investments in the South African markets. Fluctuations or movements in exchange rates may cause the value of underlying investments to go up or down. The asset allocation by instrument type are reflected on a look-through basis. The asset allocation by issuer type and top issuer exposures are not reflected on a look-through basis. The fund is managed in line with Regulation 28 limits, although it is not required as per the fund's supplemental deed. The yield shown is an estimate in part based on market assumptions and forecasts. The yield is calculated by taking the interest and income receivable of all the instruments in the fund divided by the net asset value, expressed as a nominal annual rate. It is provided to give an approximate indication of the achievable yield for an investment made at the reporting date. Actual experience may differ, based on changes in market values, interest rates and changes in costs actually experienced during the investment period.

Coronation Management Company (RF) (Pty) Ltd is a Collective Investment Schemes Manager approved by the Financial Sector Conduct Authority in terms of the Collective Investment Schemes Control Act. Portfolio managed by Coronation Asset Management (Pty) (FSP 548) Ltd, an authorised financial services provider. The Management Company reserves the right to close the fund to new investors if we deem it necessary to limit further inflows in order for it to be managed in accordance with its mandate. Unit trusts are allowed to engage in scrip lending and borrowing. Standard Chartered has been appointed as trustees for the fund (www.sc.com/za; 011-2176600). Coronation is a full member of the Association for Savings & Investment SA (ASISA).

HOW ARE UNITS PRICED AND AT WHICH PRICE WILL MY TRANSACTION BE EXECUTED?

Unit trusts are traded at ruling prices set on every trading day. Fund valuations take place at approximately 15h00 each business day, except at month end when the valuation is performed at approximately 17h00 (JSE market close) and forward pricing is used. Instructions must reach the Management Company before 14h00 (12h00 for the Money Market Fund) to ensure same day value. The payment of withdrawals may be delayed in extraordinary circumstances, when the manager with the consent of the fund trustees deem this to be in the interest of all fund investors. These circumstances may include periods when significant underlying markets suspend trading which will prevent accurate valuation of the instruments held in the fund. When the suspension of trading relates to only certain assets held by the fund, these assets may be side-pocketed. This process allows normal liquidity on the assets that can be valued, but will delay liquidity on the affected portion of the fund. If the fund is faced with excessive withdrawals, the affected withdrawals may be ring-fenced, which is the separation and delayed sale of the assets reflecting the interest of the liquidity seeking investors. It ensures that the sale of a large number of units will not force Coronation to sell the underlying investments in a manner that may have a negative impact on remaining investors of the fund.

HOW WAS THE PERFORMANCE INFORMATION INCLUDED IN THIS FACT SHEET CALCULATED?

Performance is calculated by Coronation as at the last day of the month for a lump sum investment using Class A NAV prices with income distributions reinvested. All underlying price and distribution data is sourced from Morningstar. Performance figures are quoted after the deduction of all costs (including manager fees and trading costs) incurred within the fund. Note that individual investor performance may differ as a result of the actual investment date, the date of reinvestment of distributions and dividend withholding tax, where applicable. Annualised performance figures represent the geometric average return earned by the fund over the given time period. Unannualised performance represents the total return earned by the fund over the given time period, expressed as a percentage.

WHAT IS THE TOTAL EXPENSE RATIO (TER) AND TRANSACTION COSTS (TC)?

TER is calculated as a percentage of the average net asset value of the portfolio incurred as charges, levies and fees in the management of the portfolio. The TER charged by any underlying fund held as part of a fund's portfolio is included in the fund expenses portion of the TER, but trading and implementation costs incurred in managing the fund are excluded. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TER's. The 1 year TER is for the 12 months to end of the current financial year (updated annually). The 3 year TER is for a rolling 36-month period to the last quarter end (December, March, June and September).

Transaction costs are a necessary cost in managing a fund and impacts the fund's return. They should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund, the investment decisions of the investment manager and the TER.

The Total Investment Charge is the sum of the Total Expense Ratio (TER) and transaction costs.

ADVICE AND PLATFORM COSTS

Coronation does not provide financial advice. If you appoint an adviser, advice fees are contracted directly between you and the adviser. For more information please contact the relevant platform (Linked Investment Service Provider or Life Assurance Provider).

WHERE CAN I FIND ADDITIONAL INFORMATION?

Additional information such as daily fund prices, brochures, application forms and a schedule of fund fees and charges is available on our website, www.coronation.com
