

WHAT IS THE FUND'S OBJECTIVE?

The fund aims to maximise long-term growth from investing in a select group of small to medium-sized JSE-listed companies.

It seeks to outperform the combined JSE Mid and Small Cap Indices.

WHAT DOES THE FUND INVEST IN?

The fund invests in companies that form part of the JSE Small or Mid Cap Indices, or in companies that have a market capitalisation smaller than the company with the lowest market capitalisation in the JSE Large Cap Index.*

*The investment universe has been amended to align with the ASISA category specifications for Mid and Small Cap Funds

IMPORTANT PORTFOLIO CHARACTERISTICS AND RISKS**Risk Profile****Maximum growth/
minimum income exposures**

The fund actively seeks out attractively valued companies that could offer strong long-term growth.

Shares are selected following rigorous research into the long-term potential of a company, and whether it is currently attractively valued relative to its sector.

Shares can be volatile investments, and smaller companies in particular may experience price swings. Smaller companies have fewer shares trading freely in the market, which can restrict trading and amplify price movements. Consequently, there is a heightened risk of capital loss over the short term.

However, given its focus on investing only in attractively valued shares that could offer long-term growth, the fund may preserve capital better than its benchmark over the long run.

The fund is concentrated and only invests in one sector of the market, making it riskier than a general equity fund.

HOW LONG SHOULD INVESTORS REMAIN INVESTED?

The fund is managed to deliver the best possible returns over the long term; an investment horizon of five years or more is therefore ideal.

WHO SHOULD CONSIDER INVESTING IN THE FUND?

Investors who are building wealth, and who

- wish to benefit from the potential growth in medium-size and small companies;
- want to diversify their investments to include specific exposure to companies outside of the JSE Large Cap Index;
- accept the inherent volatility in investing in less liquid shares;
- want to hold the Smaller Companies Fund as one of multiple funds in their investment portfolio.

WHAT COSTS CAN I EXPECT TO PAY?

An annual fee of 1.00% (excl. VAT) is payable.

Fund expenses that are incurred in the fund include trading, custody and audit charges. All performance information is disclosed after deducting all fees and other portfolio costs.

We do not charge fees to access or withdraw from the fund.

Please note that the commentary is for the retail class of the Fund.

The Fund has had a good start to 2022, returning 6.8% for the first quarter (Q1-22). Over three years, the Fund has returned 19.6% per year, making it the best performing Fund in its category.

The two largest additions to the Fund over the quarter were Pick n Pay and Motus (an automotive retailer). We currently hold a big position in Spar, which we like for its defensive and high-quality characteristics. Typically, food retailers attract some of the highest price earnings multiples (PE) in the market due to these characteristics. Spar trades on a 13 times forward multiple, which we think is attractive. This is the same multiple that we bought Pick n Pay on. As a comparison, Shoprite trades on a 20 times forward multiple. We acknowledge that Shoprite has been the standout winner in the sector, but we think the disparity in the market's ratings of these three businesses (Pick n Pay, Shoprite and Spar) is overdone. In an environment where the Fund (and mid and small caps in general) has delivered strong performance, we think it is appropriate to increase the defensive element of the Fund.

While we have been somewhat late to the party in Motus, we still think it is attractively valued on a 6.5 times forward PE. Motus is well represented in the parts of the car market that is growing, which means that the business continues to take market share – which now sits at a very healthy level of around 22%. On top of this, the business will also benefit from the normalisation of car sales volumes in South Africa (SA), which are still recovering post the Covid-19 period. The same applies to their car rental business. Management is also making good capital allocation decisions – they have bought back about 10% of their own shares in the past year.

The two largest sells in the quarter were Cashbuild and Nedbank.

While we really like Cashbuild as a business, we sold out based on valuation and the fact that we consider current earnings levels to be above normal. Cashbuild was one of the few businesses in SA that benefited from the pandemic, in that many people used lockdowns and the increased time spent at home to do home improvements/repairs. As such, Cashbuild's earnings grew around 140% in its 2021 financial year. This has set a high base for the years ahead and Cashbuild's earnings are very likely to fall in the year ahead.

Nedbank has been a fantastic performer for the fund. We bought it at a very good price as it fell out of the large cap index into our universe, and we have seen the share price appreciate well over 100% as all the banks have delivered a strong recovery in their earnings to levels close to pre-Covid-19 times. We have not sold out completely as we still think the share is reasonably attractive, but the easy gains have certainly been made.

SA mid and small caps are largely isolated from some of the big issues (namely China tech regulation and the Russian/Ukrainian war) weighing negatively on portfolios that can invest across the entire market. This has been positive for fund returns. The three-year compound annual growth rate return of 19.6% strikes us as fairly remarkable, especially considering the fact that it includes the Covid-19 pandemic disruption. And while many businesses in the Fund continue to show strong earnings delivery, it looks like the returns going forward are unlikely to match those of the past few years.

IMPORTANT INFORMATION THAT SHOULD BE CONSIDERED BEFORE INVESTING IN THE CORONATION SMALLER COMPANIES FUND

The Smaller Companies Fund should be considered a long-term investment. The value of units may go down as well as up, and therefore Coronation does not make any guarantees with respect to the protection of capital or returns. Asset allocation and top 10 holdings are reflected on a look-through basis. Coronation Management Company (RF) (Pty) Ltd is a Collective Investment Schemes Manager approved by the Financial Sector Conduct Authority in terms of the Collective Investment Schemes Control Act. Portfolio managed by Coronation Asset Management (Pty) (FSP 548) Ltd, an authorised financial services provider. The Management Company reserves the right to close the fund to new investors if we deem it necessary to limit further inflows in order for it to be managed in accordance with its mandate. Unit trusts are allowed to engage in scrip lending and borrowing. Standard Chartered has been appointed as trustees for the fund (www.sc.com/za; 011-2176600). Coronation is a full member of the Association for Savings & Investment SA (ASISA).

HOW ARE UNITS PRICED AND AT WHICH PRICE WILL MY TRANSACTION BE EXECUTED?

Unit trusts are traded at ruling prices set on every trading day. Fund valuations take place at approximately 15h00 each business day, except at month end when the valuation is performed at approximately 17h00 (JSE market close) and forward pricing is used. Instructions must reach the Management Company before 14h00 (12h00 for the Money Market Fund) to ensure same day value. The payment of withdrawals may be delayed in extraordinary circumstances, when the manager with the consent of the fund trustees deem this to be in the interest of all fund investors. These circumstances may include periods when significant underlying markets suspend trading which will prevent accurate valuation of the instruments held in the fund. When the suspension of trading relates to only certain assets held by the fund, these assets may be side-pocketed. This process allows normal liquidity on the assets that can be valued, but will delay liquidity on the affected portion of the fund. If the fund is faced with excessive withdrawals, the affected withdrawals may be ring-fenced, which is the separation and delayed sale of the assets reflecting the interest of the liquidity seeking investors. It ensures that the sale of a large number of units will not force Coronation to sell the underlying investments in a manner that may have a negative impact on remaining investors of the fund.

HOW WAS THE PERFORMANCE INFORMATION INCLUDED IN THIS FACT SHEET CALCULATED?

Performance is calculated by Coronation as at the last day of the month for a lump sum investment using Class R NAV prices with income distributions reinvested. All underlying price and distribution data is sourced from Morningstar. Performance figures are quoted after the deduction of all costs (including manager fees and trading costs) incurred within the fund. Note that individual investor performance may differ as a result of the actual investment date, the date of reinvestment of distributions and dividend withholding tax, where applicable. Annualised performance figures represent the geometric average return earned by the fund over the given time period. Unannualised performance represents the total return earned by the fund over the given time period, expressed as a percentage.

BENCHMARK DETAILS

The benchmark used for performance purposes is a free-float market cap weighted index of small and mid-cap indices excluding real estate.

Note that we use the FTSE/JSE Africa Small Cap Index for compliance monitoring purposes.

WHAT IS THE TOTAL EXPENSE RATIO (TER) AND TRANSACTION COSTS (TC)?

TER is calculated as a percentage of the average net asset value of the portfolio incurred as charges, levies and fees in the management of the portfolio. The TER charged by any underlying fund held as part of a fund's portfolio is included in the fund expenses portion of the TER, but trading and implementation costs incurred in managing the fund are excluded. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TER's. The 1 year TER is for the 12 months to end of the current financial year (updated annually). The 3 year TER is for a rolling 36-month period to the last quarter end (December, March, June and September).

Transaction costs are a necessary cost in managing a fund and impacts the fund's return. They should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund, the investment decisions of the investment manager and the TER.

The Total Investment Charge is the sum of the Total Expense Ratio (TER) and transaction costs.

ADVICE AND PLATFORM COSTS

Coronation does not provide financial advice. If you appoint an adviser, advice fees are contracted directly between you and the adviser. For more information please contact the relevant platform (Linked Investment Service Provider or Life Assurance Provider).

WHERE CAN I FIND ADDITIONAL INFORMATION?

Additional information such as daily fund prices, brochures, application forms and a schedule of fund fees and charges is available on our website, www.coronation.com
