

WHAT IS THE FUND'S OBJECTIVE?

The fund aims to maximise long-term growth from investing in a select group of resource companies. It seeks to outperform an index of resource companies listed on the Johannesburg Stock Exchange (the JSE Resources Index) over the longer term.

WHAT DOES THE FUND INVEST IN?

The Resources Fund primarily invests in the shares of companies listed on the Johannesburg Stock Exchange but can also invest in international equities.

The fund will remain fully invested in a broad range of resource and basic materials industry shares that are affected by changes in the commodity cycle. This includes companies involved in mining, minerals, energy, natural resources and other commodities.

The fund is mandated to use derivative instruments for efficient portfolio management purposes.

IMPORTANT PORTFOLIO CHARACTERISTICS AND RISKS

Risk Profile

Maximum growth/ minimum income exposures

The fund's managers actively seek out attractively valued companies that could offer strong long-term growth. The fund reflects Coronation's best investment views in the resource sector.

Shares are selected following rigorous research into the long-term potential of a company. Shares can be volatile investments, and the cyclical demand for commodities can add to the risk of capital loss.

The fund is concentrated and only invests in one sector of the market, making it riskier than a general equity fund.

HOW LONG SHOULD INVESTORS REMAIN INVESTED?

The fund is managed to deliver the best possible returns over the long term; an investment horizon of five years or more is therefore ideal.

WHO SHOULD CONSIDER INVESTING IN THE FUND?

Investors who are building wealth and

- want to diversify their investments to include specific exposure to the resource sector;
- believe that resource shares offer compelling value;
- accept the cyclical nature of commodity demand and the resulting increased risk of short-term losses;
- want to hold the Resources Fund as one of multiple funds in their investment portfolio.

WHAT COSTS CAN I EXPECT TO PAY?

An annual fee of 1.00% (excl. VAT) is payable.

Fund expenses that are incurred in the fund include trading, custody and audit charges. All performance information is disclosed after deducting all fees and other portfolio costs.

We do not charge fees to access or withdraw from the fund.

Performance and fund positioning

The Fund returned 26% for the quarter and 27.3% for the last 12 months. The long-term performance of the Fund remains pleasing against both the peer group and the benchmark. However, shorter-term performance has lagged both comparisons meaningfully.

Our underweight position in Gold Fields and overweight position in Mondi detracted from performance during the quarter.

Parking gold, the rest of the commodity complex has been quite rangebound. Given US President Trump's tariff announcements, various wars, and trade sanctions, this could be considered a buoyant outcome for commodity prices. The weakening US dollar has been a supporting factor for commodity prices.

Turning to gold, we note a significant investment conundrum for both gold and gold equities. Both the gold price and South African (SA) gold miners are trading at all-time highs, and commentary and news headlines suggest we are in the "frothy phase" of a bull market. The bull case for gold rests primarily on increasing systemic risks and consistent, price-insensitive central bank buying. This buying activity is a reaction to the US weaponisation of the dollar after Russia invaded Ukraine, coupled with fears that future administrations might further undermine the dollar or attack the independence of the Federal Reserve. Other major drivers include increasing global geopolitical risk, such as brittle US-China relations, and the slow-brewing crisis associated with overindebted sovereigns globally. Given these accumulating risks, gold is seen as one of the very few legitimate monetary assets and hedges that continues to be under-owned by global investors looking for an alternative to fiat currency.

Despite the compelling bullish arguments, we maintain a cautious stance. Historically, every comparable gold bull market has been followed by a downcycle, resulting in steep losses for shareholders. Costs tend to follow prices higher, albeit with a lag. We expect the same this cycle. Furthermore, SA gold miners are characterised as inherently poor businesses due to being high-cost and having short mine lives that necessitate ongoing capital expenditure. These companies have also historically been poor stewards of shareholder capital, exhibiting poor cost control, engaging in value-destructive pro-cyclical corporate action, and failing to return cash to shareholders consistently. This informs our material underweight in gold equities. We are managing the overall size of the underweight, given the range of outcomes for the metal. This quarter, we bought Gold Fields and maintained our AngloGold position.

We have reduced our Anglo American holding. Anglo American has been a strong performer, with the market crediting it for its increased copper exposure and successful implementation of its simplification strategy. Anglo American recently announced a merger bid with Teck Resources (a Canadian-listed primarily copper producer). We view this bid as a rare "unicorn" in mining M&A: a deal in the right commodity, at a fair price, with legitimate operational synergies. We have increased Glencore. Glencore has lagged due to production mishaps in their copper assets, as

well as a lower thermal coal price. We see both factors as temporary, with the share price discounting continued bad news.

Grindrod has been a long time holding of the Fund and has not received much airtime. The exit from non-core activities (Cockett and KwaZulu-Natal land) allows greater focus on their core businesses. Grindrod's crown jewel is its stake in the Port of Maputo and Matola Terminal in Mozambique. These provide a very efficient export route to market for numerous commodities. Grindrod recently increased its ownership stake here. Plans are in place to materially increase throughput through these facilities. Grindrod is also well-placed to participate in the liberalisation of South Africa's port and rail assets, historically the sole domain of Transnet and its subsidiaries. Grindrod trades on an undemanding 8x multiple, which unwinds quickly as terminal volumes are expected to rise. Our view is that Grindrod will either rerate or risk being targeted for an international logistics player looking to secure a Southern African route to market.

Mondi, which generates 85% of its revenue from sustainable paper packaging, operates with significant competitive advantages, or "moats". These include its market leadership positions, such as being the global number one producer of kraft paper and sack kraft bags, and the leading virgin containerboard producer in Europe. The business is supported by a vertically integrated model, stretching from forest ownership to placing box-making plants near customers, which ensures a captive route to market and allows the company to be 90% energy self-sufficient using biomass energy. Furthermore, Mondi is a low-cost operator, with approximately 75%-80% of its production capacity situated in the lowest half of the industry cost curve, enabling profitability throughout the business cycle. The downcycle in Mondi's key markets caused by an initial supply wave and then Europe's economic softness has been longer and deeper than initially expected. However, we see it as a cyclical rather than a structural issue. Mondi's share price is discounting the latter.

IMPORTANT INFORMATION THAT SHOULD BE CONSIDERED BEFORE INVESTING IN THE CORONATION RESOURCES FUND

The Resources Fund should be considered a long-term investment. The value of units may go down as well as up, and therefore Coronation does not make any guarantees with respect to the protection of capital or returns. Past performance is not necessarily an indication of future performance. The fund is mandated to invest into foreign securities and may as a result be exposed to macroeconomic, settlement, political, tax, reporting or illiquidity risk factors that may be different to similar investments in the South African markets. Fluctuations or movements in exchange rates may cause the value of underlying investments to go up or down. Asset allocation and top 10 holdings are reflected on a look-through basis. Any African exposure (ex SA) is reflected under international assets. Coronation Management Company (RF) (Pty) Ltd is a Collective Investment Schemes Manager approved by the Financial Sector Conduct Authority in terms of the Collective Investment Schemes Control Act. Portfolio managed by Coronation Asset Management (Pty) Ltd (FSP 548), an authorised financial services provider. The Management Company reserves the right to close the fund to new investors if we deem it necessary to limit further inflows in order for it to be managed in accordance with its mandate. Unit trusts are allowed to engage in scrip lending and borrowing. Standard Chartered has been appointed as trustees for the fund (www.sc.com/za; 011-2176600). Coronation is a full member of the Association for Savings & Investment SA (ASISA).

HOW ARE UNITS PRICED AND AT WHICH PRICE WILL MY TRANSACTION BE EXECUTED?

Unit trusts are traded at ruling prices set on every trading day. Fund valuations take place at approximately 15h00 each business day, except at month end when the valuation is performed at approximately 17h00 (JSE market close) and forward pricing is used. Instructions must reach the Management Company before 14h00 (12h00 for the Money Market Fund) to ensure same day value. The payment of withdrawals may be delayed in extraordinary circumstances, when the manager with the consent of the fund trustees deem this to be in the interest of all fund investors. These circumstances may include periods when significant underlying markets suspend trading which will prevent accurate valuation of the instruments held in the fund. When the suspension of trading relates to only certain assets held by the fund, these assets may be side-pocketed. This process allows normal liquidity on the assets that can be valued, but will delay liquidity on the affected portion of the fund. If the fund is faced with excessive withdrawals, the affected withdrawals may be ring-fenced, which is the separation and delayed sale of the assets reflecting the interest of the liquidity seeking investors. It ensures that the sale of a large number of units will not force Coronation to sell the underlying investments in a manner that may have a negative impact on remaining investors of the fund.

HOW WAS THE PERFORMANCE INFORMATION INCLUDED IN THIS FACT SHEET CALCULATED?

Performance is calculated by Coronation as at the last day of the month for a lump sum investment using Class P NAV prices with income distributions reinvested. All underlying price and distribution data is sourced from Morningstar. Performance figures are quoted after the deduction of all costs (including manager fees and trading costs) incurred within the fund. Note that individual investor performance may differ as a result of the actual investment date, the date of reinvestment of distributions and dividend withholding tax, where applicable. Annualised performance figures represent the geometric average return earned by the fund over the given time period. Unannualised performance represents the total return earned by the fund over the given time period, expressed as a percentage.

BENCHMARK DETAILS

The benchmark used for performance purposes is the FTSE/JSE Resources Index.

Note that we use the FTSE/JSE Africa Resource 10 Index for compliance monitoring purposes.

WHAT IS THE TOTAL EXPENSE RATIO (TER) AND TRANSACTION COSTS (TC)?

TER is calculated as a percentage of the average net asset value of the portfolio incurred as charges, levies and fees in the management of the portfolio over the period referenced. The TER charged by any underlying fund held as part of a fund's portfolio is included in the fund expenses portion of the TER, but trading and implementation costs incurred in managing the underlying fund are excluded. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TER's. The 1 year TER is for the 12 months to end of the previous financial year (updated annually). The 3 year TER is for a rolling 36-month period to the last available quarter end (December, March, June and September).

Transaction costs are a necessary cost in managing a fund and impacts the fund's return. They should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund, the investment decisions of the investment manager and the TER.

The Total Investment Charge is the sum of the Total Expense Ratio (TER) and transaction costs.

ADVICE AND PLATFORM COSTS

Coronation does not provide financial advice. If you appoint an adviser, advice fees are contracted directly between you and the adviser. For more information please contact the relevant platform (Linked Investment Service Provider or Life Assurance Provider).

WHERE CAN I FIND ADDITIONAL INFORMATION?

Additional information such as daily fund prices, brochures, application forms and a schedule of fund fees and charges is available on our website, www.coronation.com
